
layout: page title: Javier Jia (Jianfeng Jia)

tagline: Supporting tagline

{% include JB/setup %}

Read [Jekyll Quick Start](#)

Complete usage and documentation available at: [Jekyll Bootstrap](#)

Update Author Attributes

In `_config.yml` remember to specify your own data:

```
title : My Blog =)

author :
  name : Name Lastname
  email : blah@email.test
  github : username
  twitter : username
```

The theme should reference these variables whenever needed.

Here's a sample "posts list".

- ```
{% for post in site.posts %}
• {{ post.date | date_to_string }} » {{ post.title }}
{% endfor %}
```

## To-Do

This theme is still unfinished. If you'd like to be added as a contributor, [please fork!](#) We need to clean up the themes, make theme usage guides with theme-specific markup examples.
